plenty of interaction. In addition to invited talks, the conference featured a wide range of presentations and seminars delivered by external speakers. Researchers had the opportunity to present their research achievements with their colleagues from various institutions.

The researchers believe that azelastine can be considered a safe option against the symptoms of hay fever, which has brought from early R&D to approval. The researchers are now looking forward to welcoming another cohort of young scientists to our campus next July. With their fresh perspectives and innovative ideas, we expect to see new discoveries and advancements in the field of science.

The Vienna BioCenter PhD Program symposium took place on November 9-10 and featured a wide range of topics and subjects that could appeal to everyone. The next organizing committee has been formed and is already working on the preparations for the next event. There was an added dimension speaker to round off the symposium, and many interesting discussions took place.

The Vienna BioCenter Summer School 2024 will be held in the month of July, and we are looking forward to hosting a diverse group of students and researchers from across the globe.

HeartBeat.bio AG is a biotechnology company focused on the development of medical devices for the treatment of heart diseases. The company has been granted after successful approval of the registration.
