Booster Results for Lyme Disease Vaccine Candidate

Booster Results for Lyme Disease Vaccine Candidate

invIOs starts additional clinical trial of novel cell therapy APN401 with FFG

IRF1 levels in a so-called 'Goldilocks' range lead to inflammatory syndromes such as rheumatoid arthritis and lupus.

Proxygen named among "Fierce 15"

IRF1 levels in a so-called 'Goldilocks' range lead to inflammatory syndromes such as rheumatoid arthritis and lupus.

New origin story for PRC2

The key protein complex PRC2 was discovered decades ago to silence transposon silencing mechanisms. Berger and his lab of Juergen Knoblich developed a transposon silencing mechanism.
